

ABSTRACT OF THE DISCLOSURE**SIMPLIFYING BROWSER SEARCH REQUESTS**

- 5 A method, apparatus, and computer instructions for searching for information. In response to receiving an input string, the input string is parsed for a universal resource identifier and a search string, wherein the universal resource identifier and the search string are
- 10 separated from each other in the input string by a selected character. The information corresponding to the search string is searched through a Web page identified by the universal resource identifier. The information may be searched by at least one of (a) locating a search
- 15 object on the Web page, and using the search object to search for the information; and (b) searching the Web page for information corresponding to the search string.
